- **TypeScript**
- **Bootstrap**
- **Tailwind CSS**
- **Apollo Client**
- **GraphQL**
- **Ionic Framework**
- **Azure**
- **AWS Amplify**
- **Firebase**
- **WordPress**
- **Windows Forms**
- **Doctrine ORM**
- **DevExpress Winforms**
- **C#**
- **Visual Basic [.Net] (VB.Net)**
- **E-Commerce**
- **Git**
- **OOP**
- **Google Analytics**
- **SEO**
- **Hosting**
- **Deployment**
- **Adobe Suite (Photoshop, Illustrator, After Effects, Premiere Pro)**

EMPLOYMENT & EXPERIENCE

WEBPRO MEDIA

Lagos, Nigeria

Freelance Full Stack Developer

- MERN Stack Job Board Admin Application

Link: <https://jobber-react.vercel.app/>

The back-end server uses Node.js and Express. It exports REST APIs and interacts with MongoDB Database using Mongoose ODM for CRUD operations.

<https://github.com/peterdez/jobber-api>

React.js Frontend with Redux Toolkit: It consumes the Rest API, displays and modifies jobs data with React Router, Axios & Bootstrap. React Client sends HTTP Requests and retrieves HTTP Responses using Axios, consumes data on the components.

<https://github.com/peterdez/jobber-react>

- NodeJs + Express + MongoDB API

<https://github.com/peterdez/nodejs-users-app>

Built a NodeJs + Express + MongoDB API that can persist, edit, and retrieve user information. The API allows the caller to persist either one or more users, fetch an existing user by their userID, edit an existing user by their userID, as well as fetch all the users who've been persisted so far.

- Laravel Gigs Application

<https://github.com/peterdez/laravel-gigs>

Built an application for managing "Gigs". A Gig is a single professional engagement, usually of short duration.

I converted the user interface design made by the design team into a live project, implementing CRUD operations for managing "Gigs" using Bootstrap and the Laravel framework.

- PHP CSV Importer:

<https://github.com/peterdez/csv-importer>

Developed a PHP web application that allows users to import countries and currencies database from CSV to a MySQL database. Created an API endpoint to return the countries and currencies dataset with pagination. Implemented a live search feature with AJAX whereby data is fetched from the database and results are shown as the user types in the search field and result narrow as the user continues to type.

- ReactNodeJS Insurance

<https://main.d2qwcljsqlxhuc.amplifyapp.com/>

A full-stack health insurance web application built with React, Express and MongoDB. The features include, user authentication, contact form and payment integration.

The database and Users collection were created successfully using MongoDB atlas. NodeJS was connected to MongoDB using Mongoose, a MongoDB object modeling tool designed to work in an asynchronous environment.

A “users” model was created which tells the database how to store data that a user passes. The app has register and login endpoints, allowing users to register and login to the application from the frontend.

Users are able to purchase policies online using Paystack payment.

The contact form data is processed by Node.js backend and an email is sent to the administrator.

The Node.js backend is deployed on Heroku. The React frontend is deployed in AWS Cloud.

- Developed custom WordPress powered e-commerce and non-ecommerce websites.
- Customized WordPress themes and plugins to the specification clients.
- Built easily extensible and update-safe child themes, thereby speeding up website development time.
- Created a Task management application with Vue.js.

EASYWARE

Full Stack Developer (Part-time)

Lagos, Nigeria

Feb 2020 - Present

- **NGO Website:**
Developed an NGO website with PHP and MySQL where the site visitors can make financial donations online to causes of their choice. This was done by integrating PayPal and Paystack payment gateways APIs.
- **Hospital Management Web Application:**
Collaborated with my team members to work on a web-based hospital management system using PHP, MySQL and Ajax technology. The application accumulates and integrates data from all departments to automate the hospital’s daily internal processes.
- **Human Resources Management Web Application:**
Collaborated with my team members to work on a human resources web application using PHP, MySQL and Ajax technology. It combines a number of functions to ensure the easy management of human resources, business processes and data.
- **Bug Fixing**
Tested software for bugs, fixed bugs and documenting processes to increase efficiency.

ELLAE CREATIVE DIGITAL BRANDING AGENCY*Senior Web Developer*

Lagos, Nigeria
Nov 2015 – Sept 2016

- Union Bank Internet Banking Web Application:
<https://uniononline.unionbankng.com/OnlineBanking/>
Developed a rich user interface for Union Bank internet banking platform.
The aim of the project was to provide a comprehensive, integrated, interoperable, and modular solution that enables Union Bank to manage evolving customer expectations. The functional implementation of the interface was developed with the popular front-end development framework, Bootstrap, which was extensively customized.
- Union Bank Desktop Application (Bank of The Future App)
Developed the user interface using a combination of Metro UI and Bootstrap.
- Rebuilt Union Bank Windows Form Quiz Application:
The quiz application is a rich client desktop application built with Windows Forms (Winforms) library and Visual Basic [.Net] (VB.Net). The application makes use of standard controls as well as DevExpress UI controls which are powered by a patent-pending server-side data processing engine.

WEBPRO MEDIA*Web Developer*

Lagos, Nigeria
Jan 2014 – Oct 2015

- Developed visually appealing and functional custom WordPress powered e-commerce and non-e-commerce websites to the satisfaction of clients.
- Customized several WordPress themes and plugins in order to suit the specific needs of clients.
- Built easily extensible and update-safe child themes, thereby speeding up website development time.
